

Sales Performance Dashboard (2014–2017) – Excel Project

Overview

- Objective: Analyze multi-year sales performance to identify top-performing regions, product categories, and profitability drivers.
- Dataset: Sales dataset with 9,995 rows and 21 columns, covering orders from 2014–2017.
- Tools Used: Microsoft Excel 2016 (Pivot Tables, Pivot Charts, Slicers, Calculated Fields, Sparklines).
- Key Metrics: Total Sales, Orders, Profit, Profit Margin (%), Category & Region-wise performance.

Dashboard Insights

(High-level sales performance dashboard built in Excel 2016)

Key Insights

- **Top-performing region:**
West region leads overall, with California recording the highest order volume (2,001 orders) across 2014–2017.
- **Best-selling category:**
Technology generated the highest revenue (~\$836K), driven primarily by Phones (~\$330K).

- *Category-level highlights:*
 - Furniture sales were led by Chairs (~\$328K)
 - Office Supplies performed strongest in Storage (~\$223K)
- *Business insight:*

Sales are heavily concentrated in a small number of high-performing states and sub-categories, indicating opportunities to optimize inventory and regional focus.

(No strong seasonal trend observed during the analysis period.)

Limitations

- Built using **Excel 2016**, without access to newer features such as XLOOKUP, automated data type detection, AI insights, or modern chart enhancements.
- Dataset is an **open sample dataset**, not tied to a real organization — no defined sales targets or cost benchmarks for deeper profitability evaluation.
- Older Excel versions required **manual region and currency standardization** (system locale adjustment) to correctly format USD values.
- Date inconsistencies had to be resolved manually during import, as Excel 2016 lacks automatic pattern correction available in newer versions.

Potential Improvements

- Add **sales targets** or benchmarks to evaluate performance against goals.
 - Enhance analysis using **Power Query / Power Pivot** for scalable data modeling.
 - Extend the dashboard with **forecasting or YoY growth analysis** if longer time-series data is available
-
